

Baxter Gravitational Pump with Slide Clamp

What to do if you get chest pain

You will receive chemotherapy through a Baxter Gravitational Pump. Some chemotherapy drugs can cause chest pain, which may be serious and need immediate medical attention.

If you experience chest pain or discomfort please:

1. slide the clamp across the line to stop the flow of chemotherapy
2. call triple 000 for an ambulance

The colour of the Baxter Gravitational Pump to may differ to the picture shown below due to the drug or volume needed for your treatment.

Diagram of Baxter Pump (*Indicating clamp*)

If the line dislodges in any way, or leaks blood or fluid in the dressing please:

1. Slide the clamp across the line to stop the flow of chemotherapy (as indicated in the picture above), and
2. During business hours contact Oncology Outpatients on 6174 8471
3. After hours present to the Emergency Department.

NOTES: (*for you to record information from the education session*)
