

## ACT Influenza Report No. 4

**Summary:** The numbers of influenza cases reported to ACT Health indicate increased influenza activity in the month of August, consistent with expected seasonal patterns and national trends.

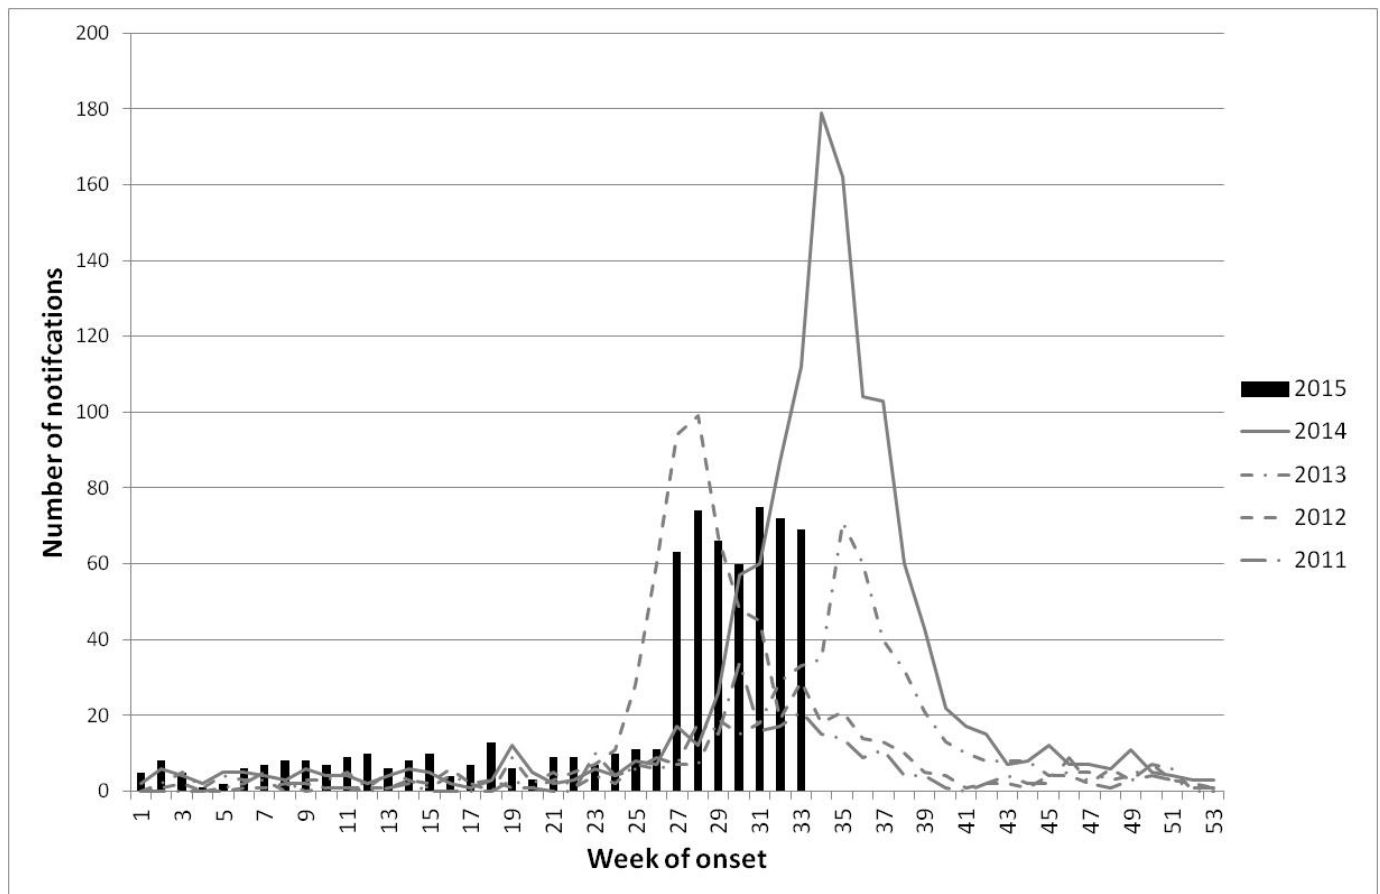

### Influenza notifications

*Reporting Period: 1 January to 15 August 2015, Weeks 1-33*

Between 1 January and 15 August 2015, there were 669 notifications of influenza reported in the Australian Capital Territory. In the previous 5 years, the average number of cases reported in the same period was 291 (Table 1). Forty-nine percent (n=330) of notifications were influenza A. Of the 83 influenza A notifications with subtype information available, 35 (42%) were H1N1 and 48 (58%) were H3 (presumed H3N2). In previous years, the proportion of influenza A cases has been comparatively greater than in 2015 (Table 1). During the fortnight of 2 August to 15 August 2015, 141 notifications of influenza were received, 104 (74%) of which were influenza B. In the previous fortnight, 135 influenza notifications were received.

Of the 669 notifications received year to date, 54% (n=361) were in females. Most notifications were in 0 to 9 year olds (n=122, 18%), followed by 30 to 39 year olds (n=109, 16%) (Fig 2). The median age of cases was 35 years. During this reporting fortnight, 57% (n=80) of notified cases were females.
